

Government has development needs. Companies have CSR money. NGOs / agencies can execute work. Officers verify, approve, monitor, and close the project.

So the portal connects these people in a controlled way:

Plain text

Public / Government Need

Government Pitch / Corporate Enquiry

CSR Relationship Manager checks feasibility

Joint Secretary approves or rejects

District Nodal Officer is appointed

MoU / Project onboarding

Execution + milestone tracking

UC / documents / inspection

Completion + impact report

Who will use this portal?

1. Public users / citizens

They can view public CSR information such as approved development needs, projects, reports, district ranking, transparency dashboard, top contributors, and success stories. The backend has public routes for requirements, projects, and government reports.

They do not need to login for public pages.

2. NGO / Implementing Agency

NGOs can register, upload documents, maintain legal/compliance records, and execute projects after selection. The database has NGO fields like registration number, Darpan number, CSR-1, PAN, 12A, 80G, address, district, taluka, documents, bank accounts, projects, risk scores, and users.

In simple words, NGO use is:

Plain text

Register

↓

Upload documents

↓

Get verified / empanelled

↓

Apply or get assigned to CSR project

↓

Upload progress evidence

↓

Upload utilization certificate

↓

Complete project

3. CSR Company / Corporate

Companies can register or submit CSR interest. The company profile stores CIN, GST, PAN, CSR budget, CSR policy, CSR head details, preferred districts, preferred sectors, budget range, and funding preferences.

Company flow is:

Plain text

Company submits CSR enquiry / interest

↓

Tracking ID is generated

↓

Relationship Manager contacts company

↓

Feasibility is checked

↓

JS approval happens

↓

Company funds approved project

↓

Company tracks project progress and fund usage

There are backend routes where corporates can submit public interest on government pitches.

4. Government Department / Government Officer

Government officers can submit development needs or “government pitches.” These are needs like school infrastructure, water projects, health facilities, district development requirements, etc.

The government pitch route allows pitch submission, public listing, RM verification, and JS approval.

Simple flow:

Plain text

Government officer creates development need

↓

RM verifies it

↓

Joint Secretary approves it

↓

It becomes publicly visible

↓

Companies show interest

↓

Project is created

5. CSR Relationship Manager

This is one of the most important roles. The RM acts like the bridge between company, government need, and approval authority.

The RM dashboard has routes for dashboard stats, pending enquiries, pending pitches, enquiry details, interactions, feasibility assessment, corporate interests, and escalations.

RM flow:

Plain text

See new corporate enquiries

↓

Contact company

↓

Understand CSR budget and interest area

↓

Check matching government needs

↓

Verify government pitches

↓

Prepare feasibility assessment

↓

Send it to Joint Secretary

6. Joint Secretary

Joint Secretary is the higher approval authority. JS reviews feasibility assessments, approves/rejects, appoints district nodal officers, sees escalations, and checks government pitches.

The JS route has dashboard, assessments list, assessment detail, JS decision, nodal officer appointment, escalations, nodal officer list, and government pitch approval queue.

Simple JS flow:

Plain text

Open JS dashboard

↓

Review RM feasibility report

↓

Approve / reject / ask clarification

↓

Appoint District Nodal Officer

↓

Handle escalations

↓

Monitor high-level project status

7. District Nodal Officer

District Nodal Officer handles ground-level execution and verification. This role checks milestones, utilization certificates, inspections, handover, grievances, and progress reports.

The nodal officer routes include dashboard, my projects, milestone status update, milestone verification, UC verification, inspections, handover, MoU status, grievances, and progress report generation.

Simple nodal officer flow:

Plain text

See assigned district projects

↓

Track milestones

↓

Verify physical progress

↓

Verify utilization certificate

↓

Create inspection report

↓

Handle grievance

↓

Confirm handover/completion

8. Portal Admin / Super Admin / Master Admin

Admin manages users, verification, reports, settings, documents, audit logs, tenants, organizations, roles, permissions, and platform-level control.

The backend has core routes for auth, companies, analytics, upload, notifications, audit logs, documents, reports, admin, master data, organizations, platform, government departments, public, district, company portal, OTP, and tracking.

Admin flow:

Plain text

Manage users and roles

↓

Verify organizations

↓

Control permissions

↓

View analytics and audit logs

↓

Monitor complete CSR lifecycle

↓

Generate reports

Main registration and login flow

The auth system supports register, verify OTP, login, refresh token, and logout. Registration accepts roles like NGO admin, company admin, portal admin, and beneficiary agency.

Simple user flow:

Plain text

User registers

↓

User enters organization/profile details

↓

OTP verification

↓

Login

↓

Role-based dashboard opens

Main portal flow from start to end

Flow A: Company comes with CSR money

Plain text

1. Company submits corporate enquiry.
2. Portal generates tracking ID.
3. Admin / State Cell assigns CSR Relationship Manager.
4. RM contacts company and records interaction.
5. RM prepares feasibility assessment.
6. Joint Secretary reviews the assessment.
7. JS approves and appoints District Nodal Officer.
8. Project is onboarded.
9. Nodal Officer tracks execution.
10. Implementing agency / NGO uploads progress and UC.
11. Nodal Officer verifies.
12. Project is completed and report is generated.

The corporate enquiry route supports public enquiry submission and tracking, then protected RM/admin actions like viewing, assigning RM, and recording contact.

Flow B: Government department submits a development need

Plain text

1. Government officer submits a pitch/development need.
2. RM verifies the pitch.
3. JS approves the pitch.
4. Pitch becomes public.
5. Company submits interest.
6. RM coordinates discussion.
7. Project is created.
8. Nodal Officer manages district execution.
9. Milestones, UC, inspection, and handover are tracked.

The pitch statuses also confirm this lifecycle: draft, submitted, RM verification, JS approval, public listed, corporate interest received, nodal officer assigned, MoU pending/signed, project onboarded, completed, closed.

Flow C: Project execution and monitoring

Plain text

1. Project starts after approval/MoU.
2. Milestones are created.
3. NGO / implementing agency updates progress.
4. UC is uploaded.
5. Nodal Officer verifies progress and UC.
6. Inspection is recorded.
7. Handover is confirmed.
8. Completion report / impact report is generated.

The convergence project routes support listing projects, viewing project detail, updating milestone progress, uploading utilization certificates, completing projects, and generating completion reports.

What the homepage tells users

The homepage explains the basic public process as:

Plain text

Register → Onboard → Verify → Approve & Publish

It clearly says users can register as NGO, company, or government entity; complete onboarding; upload statutory documents; get verified; and then publish/manage CSR-related work.

It also has role cards:

Plain text

NGOs → Register credentials, maintain CSR-1 records, publish proposals, submit evidence

Corporates → Submit CSR interest, browse development needs, track enquiry

Government entities → Pitch development needs with district, budget, certification, location evidence

This portal is like a government CSR control room.

Companies bring CSR funds.

Government departments submit real development needs.

CSR Relationship Manager checks whether the need and company funding match.

Joint Secretary gives official approval.

District Nodal Officer monitors actual ground execution.

NGO / implementing agency does the work and uploads proof.

Admin manages users, documents, permissions, audit, and reports.

Public can view approved projects, development needs, reports, and transparency information.

The full flow is:

Plain text

Register/Login

→ Role-based dashboard

→ Submit enquiry or development need

→ Verification by RM

→ Approval by Joint Secretary

- Nodal officer appointment
- MoU/project onboarding
- Milestone execution
- UC/proof upload
- Inspection and verification
- Completion and impact report
